Overview

Companies are struggling to implement strategy, despite elaborate strategic plans. They lack an implementation paradigm and mindset. Project management provides such a mechanism to proceed from strategic management and planning to executing those strategies through projects. This course is aimed at empowering business managers to understand the value of project management and deliver projects successfully, and to cultivate the understanding of the influence project management has on business strategy and long term sustained success.

Course Description and Main Objective

To have successful project execution, it is important to understand the functional aspects of project management, i.e., methodologies, tools and techniques. Project professionals and organizational managers must understand the value, role and function of project management in delivering successful projects and its role in the successful roll-out of business strategy. The aim of this course is to empower managers to use the basic project management tools and techniques to deliver projects successfully. In addition, to build on this knowledge by supplying further best practices to excel within the project environment and to use project management to roll out business strategy successfully.

Learning Outcomes

On the completion of this course, delegates will be able to apply the generic project management functions, such as scoping, scheduling, costing as well as controlling, monitoring and closing projects; Apply generic project management processes; Use specific project management supporting functions; Understand the strategic role of project management within the organization; and Manage the key success factors of project management within the business
